

Tascam Debuts the TM-200SG Shotgun Microphone for Video Applications

Tascam announces another addition to its expanding line of microphones. The new TM-200SG represents the videographer's choice for recording audio in the field. As a compact, highly directional shotgun microphone with a frequency response from 30 Hz to 20 kHz, this microphone is exceptionally well suited for vlogging, video shooting, plus other applications where built-in mics aren't an option.

The phantom-powered TM-200SG delivers high-quality, mix-ready audio with minimal visual intrusion due to its relatively small but rugged housing. It is lightweight and easy to handle. Featuring supercardioid directivity, this microphone focuses on the desired audio while minimizing unwanted ambient sounds – resulting in minimal cleanup in post-production. There is also a switchable low-cut filter for easy reduction of environmental noise like wind and hum.
