

IFBlue Introduces Value-Priced IFB Receiver & Dock Charging System

IFBlue, a new value-priced brand of products now being distributed worldwide by Lectrosonics, is announcing the introduction of a low-cost IFB (Interruptible Foldback) receiver pack and associated dock charging system. The new cost-effective IFBlue receivers are fully compatible with Lectrosonics IFBT4 transmitters, or any Lectrosonics Digital Hybrid Wireless transmitters operating in IFB compatibility mode, so that adding these receivers to existing IFB systems is quick and easy. The new IFBlue IFB receiver is easy to set up and use, offering 10 presets, easily programmable from the backlit LCD front panel.

Five tuning ranges are available for the new IFBR1C receivers: the VHF version covers 174-216 MHz, the A1 (470-537 MHz), B1 (537-614 MHz) and C1 (614-692 MHz) versions cover the UHF TV frequencies for most countries, and the 941 MHz Band version covers the North American license-only 941-960 MHz range. Future firmware updates can be installed in the IFBlue receivers in the field via the USB jack located behind the battery door. The IFBlue receivers have an integrated, spring-loaded belt clip for light weight and easy, secure placement.

The unit can use either disposable AA or rechargeable NiMh AA batteries, with 10

IFBlue Introduces Value-Priced IFB Receiver & Dock Charging System

hours for AA alkalines, 12+ hours for NiMh rechargeables, and 20+ hours for lithium disposables.

The IFBlue companion dock charging system, the CHSIFBR1C, is capable of charging up to four receivers when using NiMh rechargeable batteries. The charging dock units can be mechanically linked for easy organization on the mounting surface.

“Our customers have long asked for a value-priced IFB receiver, which extend to a new range of users, and we’ve sought out a partner that could make a high-performance product at a competitive price,” explains Karl Winkler, VP of Sales and Marketing at Lectrosonics. “The new IFBlue receivers and companion charging docks meet and exceed these requirements, while remaining compatible with our existing line of IFB products.”

The IFBlue receiver packs and charging station will be available in Q3, 2021. MSRP for the IFBR1C receiver pack is \$499, and the CHSIFBR1C charging dock is \$299, including power supply and AC cord.
