

Solid State Logic SSL Live V5.2 Software

Solid State Logic [InfoComm Booth 5881] will unveil the latest update to their market-leading SSL live production platform, V5.2 Software, at InfoComm 2023, to be held at the Orlando Convention Centre between June 14 and 16. SSL Live V5.2 adds integrated control of d&b Soundscape immersive loudspeaker system and significantly enhances the renowned ‘Rehearsal and Recorder’ function, along with other updates and developments. In addition to new V5.2 software showcased on the flagship SSL Live L650 and small-scale high-performance L100 consoles, SSL’s award-winning Audio Creation Products will also be featured at InfoComm 23. Register for a free SSL VIP pass using code SOL350.

Whether your professional focus is on installed sound, house of worship or touring, the SSL Live production platform offers the latest tools and workflows for skilled operators and engineers to excel. Building on the existing integrated control for Meyer Sound SpaceMapGo and L’Acoustics L-ISA, the new SSL Live V5.2 update adds control of d&b Soundscape immersive loudspeaker system within the console's ecosystem. V5.2 software also delivers greatly enhanced ‘Rehearsal and Recorder’ functionality, which includes multiple switching groups, flexible routing and locking override functions. V5.2 software is compatible with the entire range of consoles and highlights SSL’s commitment to keeping SSL Live on the cutting-end of live sound production.
