

K-array Dolomite Series

K-array, a manufacturer of innovative audio solutions, has announced the launch of its new Dolomite series, with the debut of the Dolomite KRD202P planned for ISE 2025. This full-range tower loudspeaker, featuring built-in 10" subwoofers and twelve 2" drivers, will be showcased across K-array's booths in Hall 7 and Hall 2 at this year's show. Attendees are encouraged to experience the new product first-hand at audio demos in the on-booth demo room in Hall 7.

Setting a new standard in portable audio, the Dolomite KRD202P exemplifies the very best of K-array's innovative audio technology paired with a sophisticated design tailored for the premium market, including high-end hospitality venues, premium events and residential applications. Combining high performance and attractive aesthetics, this system promises exceptional audio clarity and power within a sleek and compact form factor. "The launch of the new Dolomite sets a benchmark for portable audio systems," says Lorenzo De Poi, Brand Manager at K-array. "Featuring Pure Array Technology and a modular design, it blends versatility, durability and our usual high-performance sound quality to align perfectly with the needs of high-end applications."

Engineered for excellence, the Dolomite KRD202P packs a punch for its size, with twelve 2" drivers utilising K-array's signature Pure Array Technology (PAT), four 10" subwoofers, and four 10" passive radiators within each unit. This configuration provides a wide frequency range and immersive soundscapes in a single product, delivering a truly impressive audio experience. Its modern design integrates easily into upscale environments whilst the ability to add handles to each Dolomite unit

makes for easy transportation, ideal for rental and event applications.

Sold in a kit, including both left and right loudspeakers with an amplifier, each KRD202P unit measures just 1 metre in height and comes with a ground-stacking base, making the system easy to transport, set up and integrate into various environments. Additionally, the system is durable and weather resistant, ensuring trusted performance in any scenario, from outdoor events to home entertainment.

With the Dolomite set to premiere at ISE, the K-array team is focused on highlighting the strengths of the new product for premium applications. “For hospitality venues, Dolomite is ideal for premium restaurants, lounges or hotels that require an audio solution to match their elegant offerings,” explains De Poi. “Dolomite can also be relied on for weather-resistant sound in outdoor settings, such as weddings and other special events. In residential environments, the system has the power to elevate entertainment to the next level, bringing professional audio quality into luxury homes.”

Dolomite KRD202P will officially launch in Q2 2025 and will be previewed at ISE 2025. Attendees are invited to visit K-array booths 2H110 and 7G600 to learn more about Dolomite and other audio solutions from across the K-array ecosystem.
