

KLOTZ SEW Cable Series

In professional stage technology, wireless transmission systems have become indispensable. However, the supplied patch cables that connect the transmitters to the instruments often represent a weak link in the signal chain. The new KLOTZ "SEW Cable Series" for wireless systems provides the ideal solution: high-quality cables with robust jacks for every need - whether straight or angled, including the option with Neutrik Silent Plug connectors for noiseless instrument changes during live performances.

For secure connections at the bodypack, the "SEW Cable Series" uses screwable Switchcraft mini-jack connectors. On the instrument side, KLOTZ offers a variety of jack connector options, each with 24-carat gold-plated contacts for nearly loss-free transmission. From the proven plastic connectors of the KLOTZ mini link series to the fully „made in germany“ series with robust KLOTZ metal jacks, and the version with the noise-free Neutrik Silent Plug connectors - the "SEW Cable Series" offers the right cable for every need. In demanding live situations, the KLOTZ SEW.. series ensures a secure cable connection between the Sennheiser Evolution Wireless System and the connected devices at all times.
