Waves V15 Update

Waves Audio, a developer of professional audio signal processing technologies and plugins, announces a V15 update to its SoundGrid Rack for Avid VENUE | S6L console, delivering expanded power for your Waves plugins. This update offers major performance enhancements, making the mixing workflow with Waves plugins faster and more powerful and it significantly improves loading snapshots. Additionally, the update includes multiple bug fixes and ensures a robust infrastructure for hosting the latest Waves plugins with maximum reliability.

With this updated SoundGrid Rack, live engineers can run up to 64 stereo virtual racks, each containing up to eight Waves plugins, directly within Avid's VENUE | S6L console – with tactile control from the console's surface knobs. This setup eliminates the need for a computer host or external network switch. Users can complete the system with the WSG-HD Waves SoundGrid Option Card, VENUE software v8 or later, a Waves SoundGrid Server to process the plugins, and Waves plugin licenses of your choice.

SoundGrid Rack for Avid VENUE S6L Features:

- Run Waves plugins directly within your Avid VENUE | S6L console
- Snapshot automation for plugin parameters
- Tactile control surface mapping for all Waves plugins
- Server redundancy with automatic failover (2nd SoundGrid server is required for redundancy)

- 128 audio paths between Avid and SoundGrid at 96 kHz
- No external computer host or network switch necessary
- Follows standard operation of all plugins in the VENUE plug-in rack
- Bypass and navigate between Waves plugins within S6L
- Official support for Avid I/O sharing
