

MONACOR PA-4125DX

The latest multifunctional power amplifier with additional features from MONACOR powered by PASCAL is called PA-4125DX. With an amplifier output power of either 4 x 125 W at 4 or 8 ohms OR 2 x 250 W for 100 V components, the PA-4125DX provides sufficient power for background music. However, the PA-4125DX can do much more. Its integrated DSP module offers parametric equalizers, various high pass/low pass filters, compressor/limiter function, delay and talkover options as well as separate FIR filters for the output signals and a 5-band equalizer for each input. The user interface HTML5 at the PA-4125DX allows you to easily use various adjustment options at most versatile positions of the signal flow. The PA-4125DX can be connected to any end-user device (PC, Mac, iOS, Android, etc.) via LAN or WLAN. Libraries are available to store and recall settings. A tunable sine wave noise generator with adjustable limiting filters is also available.

MONACOR introduces the PA-4125DX
