

RTW New STAGETEC Stagenet Partner

Thomas Valter

RTW, a company with expertise in professional audio metering, announces that it has joined the Stagenet partner community by STAGETEC. As more audio workflows transition to Audio over IP (AoIP), it was a natural step and an easy decision for RTW to become part of Stagenet's intuitive platform. Now, this allows for seamless signal transmission to RTW metering units without complex pre-configuration, which

RTW to join STAGETEC's Stagenet Partner Community

simplifies AoIP workflows and reduces setup times, as Stagenet, which is designed to simplify IP signal management, eliminates the need for network expertise and supports automated device discovery and configuration.

“With the rapidly increasing use of AoIP, it is of paramount importance to us that our metering units are able to connect easily with IP-based audio networks. And with Stagenet’s use of standardized interfaces and protocols, we see it is a perfect fit and opportunity for smooth integration of RTW devices into AoIP systems, making it a complete and intuitive solution for modern professional audio environments,” says Thomas Valter, Director of Product Management and Marketing, RTW.

This integration enhances Stagenet’s capabilities significantly, as RTW has long been the industry standard in professional audio metering, establishing key benchmarks for engineers working on loudness normalization and immersive audio formats.
