Designed for utmost versatility, Flex Beat features 16 performance pads equipped with a diverse array of pattern presets. Whether users seek Loop, One Shot, or Hold behaviour, Flex Beat's pad play modes are designed to meet every need. Furthermore, these pads are MIDI-controllable, granting full control in both studio and live environments.

Creative blocks are no match for Flex Beat's extensive range of preset banks, which serve as an immediate source of inspiration. This is complemented by a launch quantization feature to ensure music remains consistently on beat. This plugin offers an expansive library of presets that inject instant character into tracks. From DJ scratches to trance gates, an array of sonic options awaits exploration. Flex Beat also supports .fzv preset imports and exports, compatible with Gross Beat, broadening the sonic palette even further.

The intricate pattern editor in Flex Beat provides a level of control commonly reserved for high-end DAWs. Features like snap-to-grid, adjustable curve types, and envelope tools enable precise sound shaping. Optimised for vivid touchscreen displays, the plugin's interface incorporates Q-LINK mapping to put essential controls within easy reach. This user-friendly interface speeds up the editing process through immediate feedback and touch controls. Flex Beat includes three unique pad playback modes - One Shot, Loop, and Hold - that facilitate experimentation with rhythmic patterns. Simply select a mode and explore new rhythmic landscapes. Though crafted with beatmakers in mind, Flex Beat finds its utility extended to sound design and FX creation, making it a valuable asset for professionals in film, TV, and gaming industries. Even seemingly inconsequential audio files can transform into a multitude of new sonic possibilities with Flex Beat.

Flex Beat is available now in VST, AU, and VST3 formats. It offers full support for MPC standalone and desktop systems running version 2.12.2 or later. A 10-day trial of the AKAI Flex Beat desktop plugin is available for download. Flex Beat is \$79.99, and has an introductory promo price of \$39.99 until 30th of November 2023. A 10 day demo can be downloaded from the website below.
