Apogee MetaRecorder Update Now Available on the App Store

An update to Apogee's MetaRecorder software is now available on the Apple App store. MetaRecorder is a revolutionary audio recording app for iPhone & iPad that offers linked recording, tagging and organizing of audio on up to 4 iOS devices. Armed with multiple devices plus Apogee products like ClipMic digital, HypeMiC, MiC+ and Symphony Desktop, you can capture superb pro quality audio in the field for interviews, conferences, audio for video and film, mobile broadcast, weddings, recitals and countless other applications.

Apply metadata tags like Keywords, Favorites, Markers and more to your audio files while recording in the field, then share the recorded audio and Final Cut Pro X XML files to Dropbox directly from MetaRecorder. When imported into Final Cut Pro X the captured metadata greatly simplifies the process of organizing and parsing your media, substantially accelerating your post-production workflow. The metadata import feature is optimized for Final Cut Pro X but also works with Adobe Premier, DaVinci Resolve and other video editing applications.

What's in new in version 2.2.1

- All Apogee products including Symphony Desktop now unlock MetaRecorder

Apogee MetaRecorder Update Now Available on the App Store

Tuesday, 30 March 2021 18:17
