

Baby Audio Chiptune Trilogy

Baby Audio introduces the Chiptune Trilogy for BA-1. The new Expansions collection features 3 unique preset packs that explore the timeless sounds of retro gaming. With 192 custom patches by leading Chiptune artists, Chiptune Trilogy turns BA-1 into an 80s-era arcade machine for your DAW.

BA-1 is modeled after a 1982 hardware synthesizer that shares similar electronic components to video game consoles of the era. That makes it ideal for recreating the distinctive sounds of early video game soundtracks. Baby Audio wanted to show you this unique side of BA-1 with a dedicated preset pack collection embracing the sound of 8-bit games and the chipwave scene.

But that's not all: BA-1 is back on intro sale to celebrate the introduction of this next set of expansions. Get BA-1 for just \$49 (51% off) or add it during checkout when you purchase the preset collection.
