Brainworx bx_aura

Brainworx, part of Native Instruments and known for their high-end audio DSP, have released a new creative reverb plugin called bx_aura. Featuring a collection of distinct algorithms, bx_aura delivers a vibrant palette of shimmering studio reverbs to wildly experimental echoes. For producers looking to create the perfect atmosphere, and for artists exploring the frontiers of sound, bx_aura delivers a new world of reverbs.

Brainworx has carefully crafted five distinct and versatile reverb types. Create a multitude of soundscapes, from physics-defying reverberations to realistic echoing environments.

- Space: Expansive and ambient soundscapes
- Room: Natural and intimate room reflections
- Echoes: Rhythmic delay elements with a reverb tail
- Soft: Smooth and subtle reverb effects – great for pads
- Reverse: One-of-a-kind backward reverb effects

Add movement and depth to mix elements with reverb controls for ducking, gating, multiple filter options, temp sync, freeze, and more. Low CPU usage and plenty of presets make bx_aura an easy choice in any mix. Add color and character with bx_aura's drive section, featuring three intensity modes: warmth, grit, and aggressive distortion.

Brainworx unveils the Reverb bx_aura

Wednesday, 31 July 2024 18:35

Key Features:

- Carefully crafted lush studio reverbs
- Five diverse, high-quality algorithms
- Low CPU usage
- Extensive presets library
- Drive section with three intensity modes
- Gate for precise reverb tail control
- Ducking for easy reverb placement
- Pre-delay and decay syncs for seamless timing
- Freeze mode
