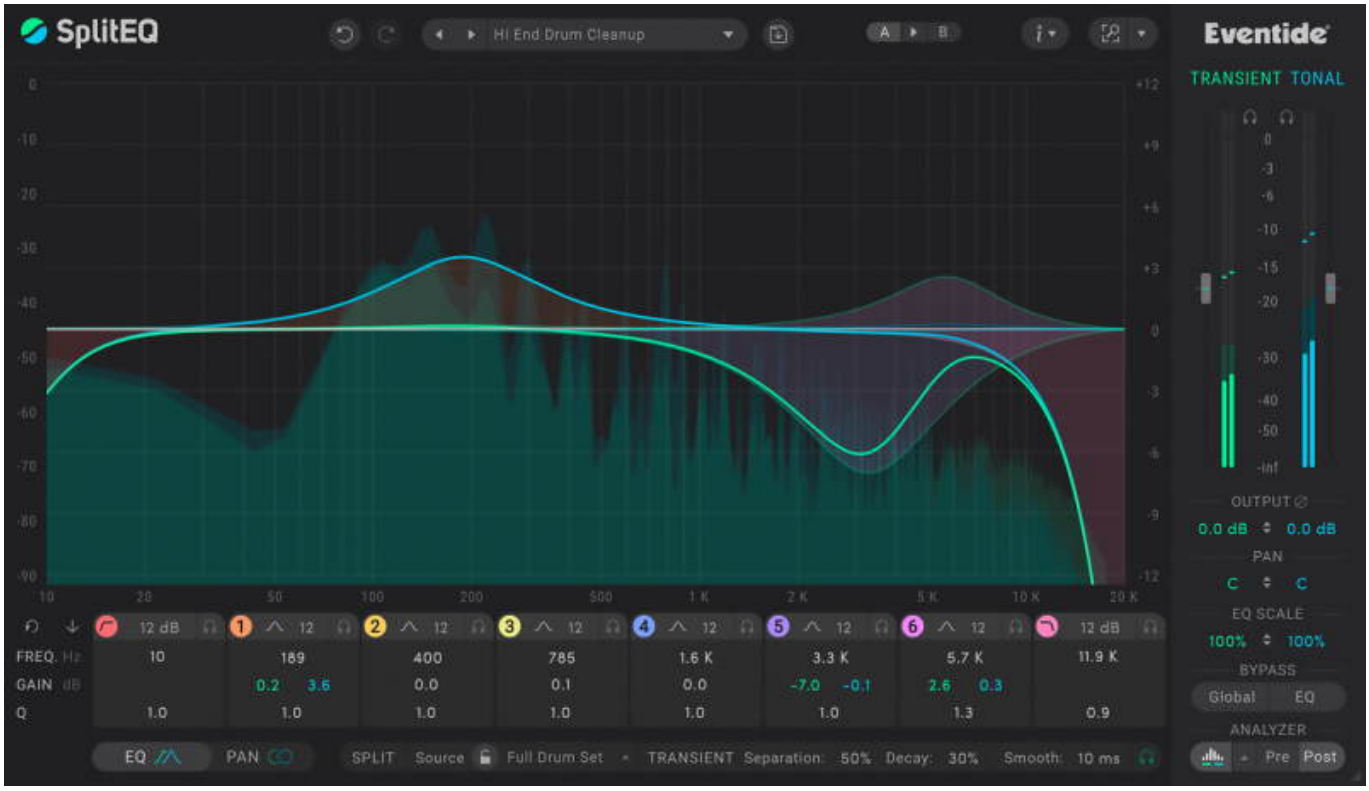
Eventide updates SplitEQ



Eventide Audio has announced the first upgrade to its SplitEQ plug-in. Version 1.0.12 of the much-lauded SplitEQ adds user-requested features such as Dark and Colorblind Accessible themes, the ability to flip the direction of its Transient and Tonal handle tabs, and mouse wheel control of Q on the displayed EQ plot, as well as other small bug fixes and improvements. The update is a free download for SplitEQ owners. Users can check their current version number by simply mousing over the Eventide logo in SplitEQ.

Launched late last year to widespread acclaim, SplitEQ is an advanced equalization plug-in featuring Eventide’s patented Structural Split technology. Input signals are divided into separate Transient and Tonal streams that then feed eight bands of precise, musical filters for independent equalization.

SplitEQ owners can download Version 1.0.12 at the website below. For new users, SplitEQ is available for $129 through the end of March 2022 (reg. $179). Cross-grade pricing is available for owners of Physion, Eventide’s first Structural Split-enabled plug-in.
