

# GForce introduces the GForce VSM IV (Virtual String Machine 4)

Tuesday, 19 March 2024 15:00

## GForce VSM IV

GForce Software presents the VSM IV, the fourth iteration of the organic and characterful-sounding Virtual String Machine. VSM IV is an intuitive yet highly powerful string machine synthesiser that's the perfect solution for creating the sound bed of your next track. It contains a wealth of sounds from 46 classic and rare machines. Those sounds can be combined using two layers, allowing for a unique fusion of instruments made exclusively possible by VSM. It comes with

1900+ presets, including 200+ new patches and over 11.5 GB of data, enabling you to craft your own unique synthetic strings. VSM IV replaces VSM3 and introduces new features that elevate the user experience and expand your creative possibilities.

VSM IV has a fully scalable UI. The new powerful Patch and Instrument Browsers empower effortless navigation through the extensive library of more than 1900 patches, ensuring quick access to the perfect sound. Take advantage of new functions like Undo, Redo, Copy, and Paste, ensuring seamless editing and flexible experimentation.

Experience authentic ageing with the new Wow and Flutter features, augmenting the organic imperfections that give these vintage instruments their unique charm. Introducing an alternative state-variable filter and ensemble effect, new LFO shaping possibilities, a chorus, and a matrix reverb adds further depth and character to your sound. The expanded Poly Aftertouch and Velocity controls offer enhanced playability and expressiveness. With these remarkable new features, VSM IV empowers you to create the perfect sound bed for your next track.

VSM IV contains a wealth of sounds from 46 classic and rare machines. These range from the first commercial string ensembles (Eminent 310 & Freeman String Symphonizer) to the highly lauded Solina, Elka Rhapsody, Logan String Melody, Korg PE2000 and many more. With the sheer amount of instruments captured within the VSM, it's simplicity itself to recreate those golden string machine tones from yesteryear. However, with the VSM's comprehensive yet intuitive feature set, plus a two-layer option, it's now possible to craft your own hybrid patches, taking these sublime vintage tones into hitherto uncharted territory.

GForce have invited Scanner, Polydata, Lightbath and Noyzelab to craft unique presets alongside Dave Spiers, Chris Macleod, Graeme Rawson and Tom Wolfe. Drawing upon a generously wide range of sample sources, and the ability to smudge, age and chew up the sound with tape emulation, filters, modulation and LFOs, it can also offer up otherworldly cinematic soundscapes, rhythmic beasts, nightmarish ambience and regal elegance. It's a shape-shifting gem!" - Robin Rimbaud (Scanner)

VSM IV – Key Features:

- The Sounds from 46 Classic and Rare String Machines
- Dual layer and split keyboard operation
- [New] 1900+ Patches including 100+ New Patches
- Over 9.5Gb of data
- [New] Fully-scalable UI
- [New] Powerful Patch and Instrument Browsers
- [New] Aging (Wow and Flutter) instability control
- [New] Additional state-variable filter
- [New] Three Band Equaliser
