

IK Multimedia TONEX FX

IK announces the release of TONEX FX, a free software and firmware update that adds 8 new effects to the TONEX Ecosystem. With the new firmware installed, TONEX Pedal and TONEX ONE become comprehensive solutions for musicians requiring a powerful compact rig they can take anywhere.

The TONEX update features 2 delays, chorus, flanger, tremolo, phaser and rotary (all tap-tempo), plus a new spring reverb. Two new effects blocks can be configured pre- or post-amp and cab for added flexibility. With TONEX FX also comes an advanced noise gate that offers pinpoint accuracy, with a pre/post option, delivering ultra-tight gating for modern guitar styles.

The 8 new effects and noise gate can be combined with Tone Models and saved as presets using the onboard controls of the TONEX Pedal. They can also be tweaked within TONEX Mac/PC and transferred to the TONEX Pedal and TONEX ONE. And, of course, you can use the new effects in TONEX Mac/PC for recording. Whether for guitar or bass, TONEX FX works seamlessly with IK's AI Machine Modeling to produce inspiring tones in a form factor that will redefine what a pedalboard can be.
