

KLOTZ expands the TITANIUM StarQuad cable series

New supreme StarQuad audio cables by KLOTZ

In addition to the award-winning TITANIUM StarQuad microphone cable (TI-M), KLOTZ now offers three more supreme StarQuad audio cables for absolutely unclouded and interference-free transmission of balanced line audio signals. The new TITANIUM StarQuad cables are available in the plug combinations XLR Female to TRS (TI-MFS), XLR Male to TRS (TI-MMS) and as a pure TRS line audio cable (TI-TRS). High-quality Neutrik metal connectors with gold-plated contacts ensure an optimal and loss-free plug-in connection for the complete TITANIUM cable series.

With the TITANIUM StarQuad series, KLOTZ has created analogue audio cables of the reference class that transmit every nuance of the audio signal directly and unaltered. The super-robust outer jacket with a diameter of almost 8 mm (!) houses the four wires arranged in a star shape with an extra large cross-section (4 x 0.34 mm²). The StarQuad cabling achieves excellent symmetry properties and brilliant damping values. The consequence is an extremely dynamic sound, with fast response, best detail fidelity and undistorted transient reproduction. In short: Infinite Tone - Perfect Silence.
