

Nembrini MP1 Pro

Nembrini Audio's latest plugin, the MP1 Pro Programmable Tube Guitar Amplifier, offers the most tonally flexible guitar amplification available since the 80's. Listen to it here.

Based on the iconic ADA MP1 Pre amplifier, synonymous with the 80's LA guitar tone and players like Eddie Van Halen, the MP1 Pro Programmable Tube Guitar Amplifier is powered by four EL34 virtual tubes. It features a Tri-State Voicing selection that allows users to choose between Distortion Tube, Clean Tube or Solid State virtual circuits.

The plugin's EQ points have been designed to replicate the sound of Fender and Marshall, yet the Presence control surpasses the range offered by either. To further extend the possibility of the original hardware and help users customize their tone, Nembrini have also included a Power Amplifier section, six guitar effects, six carefully selected cabinet emulations, four of the best mic emulations with selectable mic positions and a powerful Impulse Loader. The Impulse Loader allows up to three third party impulse responses to be loaded which can then be blended using volume, pan, phase, solo and mute controls.

The new plugin is available at an introductory price for February 2023 of \$9.99 (regular price \$19.99) for iOS and \$29.99 (Regular price \$137) for desktop use.
