

Nembrini Audio Wah

Nembrini Audio, music software developers known for their imaginative and smart plugins, launch their free Wah Pedal plugin for guitarists and bassists, available to download and use immediately.

Perfect for studio use, the Wah Pedal plugin can be used to tweak existing, pre-recorded instrument parts to make the overall tones more exciting and expressive. Considered one of the essential, 'must have' pedals for guitarists, this plugin can also be used by musicians who play bass, brass, key many other instruments.

The Nembrini Audio Wah is modelled on the classic Wah pedal created by the Thomas Organ Company, released in 1966 and manufactured by JEN Italy. The talking sound it produces can be heard on Hendrix classics like 'Up From The Sky', 'Voodoo Child (Slight Return)', 'Little Miss Lover' and 'Still Raining, Still Dreaming'. The vintage tones produced by the FREE Nembrini Audio Wah plugin can be controlled with DAW automation or MIDI pedal control. It is available as a free DAW plugin or in the iOS version for iPhone and iPad.
