

Nembrini Voltour Valve Enhancer

Nembrini Audio introduces Voltour, a digital 2 channel all valve enhancer based on the Culture Vulture by Thermionic Culture Ltd. The Voltour plugin faithfully recreates the legendary hardware in digital format extending its already vast sound possibilities. Its three individual distortions modes offer musicians endless possibilities of harmonically enriched tones; Triode to add warmth, P1 Pentode for extra intensity and P2 Pentode which uses an unusual valve configuration to give an extra octave at higher bias settings. Easy to set up and use, Voltour delivers all the renowned original character and charm of the Culture Vulture into the digital domain by seamlessly merging cutting edge technology with classic analog warmth.

Both channels features a Mixer for parallel processing on any bus to add a gentle valve presence, Phase which blends dry signals with reverse phase wet signals, Auto for wet output levelling and a Continuous Filter. The Link feature allows for perfectly matched stereo imaging to preserve balances and save time.

The new plugin is currently on offer until 15th October 2023. The desktop version introductory price is \$29.99 rising to \$99 and the iOS version \$7.99 increasing to \$14.99 after the promotion ends. Voltour is PC, Mac and iOS (VST2, VST3, AU, AAX and AUv3) compatible and requires and iLOK account.
