

## Voxengo Shumovick 2.0

Voxengo releases Shumovick 2.0, a creative dynamic noise-padding effect plugin for professional music production applications, available in AAX, AudioUnit, VST and VST3 plug-in formats, for macOS and Windows computers.

Shumovick is a renamed and improved version of CRTIV Shumovick. It features the following changes:

- Redesigned the user interface.
- Added the "Pre-Delay" and "Stereo" parameters.
- Made the "Dry Mute" switch persistent: its state is not affected by preset loading using plug-in's preset features.
- Updated the noise generator to PRVHASH 4.3.
- Changed noise gain range to -30..12.

Shumovick plug-in for professional music production applications produces a creative dynamic noise-padding effect. This effect is most effective on beats and synth sounds used in electronic music production: EDM, hip-hop, and many others. The noise-padding effect created by this plug-in is correlated to the spectral content of the sound being processed.

As a result, on beats, this creates mellow noise bursts that make bassdrum sounds a lot softer, with a bit of stereo-field enhancement effect. On synths, on the other hand, such noise-padding effect may boost the power and density of the sound. Shumovick can be also effective when used on sterile-sounding basslines where it can add a bit of "pillowy" noise background. In practice, Shumovick can be also used on acoustic drum buses adding "vintage" feel and aggression to them. When used on a full mix lightly, Shumovick can add a slight "vintage" feel to the sound, make it slightly rougher, and add a stereo-widening effect: this is reminiscent of what a reel-to-reel tape and vinyl recording media does to the sound, naturally.

Shumovick is a relatively CPU-demanding effect plug-in, so it requires a higher-end computer processor for a comfortable use. However, the CPU requirements can be lowered by adjusting plug-in's processing band count.

Shumovick features:

## Voxengo Shumovick 2.0 creative noise-padding plugin released

Saturday, 16 April 2022 21:30

---

- Noise-padding signal envelope controls
- Noise-padding signal equalization
- Selectable processing band count
- 64-bit floating point processing
- Preset manager
- Undo/redo history
- A/B comparisons
- Contextual hint messages
- All sample rates support
- Zero processing latency
- User interface color schemes
- Resizable interface
- Retina and HighDPI support

Shumovick is available for purchase online for US\$49.95. Shumovick is free for Premium Membership owners. Discontinued CRTIV Shumovick can be upgraded to Shumovick for US\$9.95. 20% OFF sale is currently in effect! Demo version of Shumovick can be downloaded freely at the Voxengo web site.
