

Zoom MS-70CDR+ MultiStomp

Zoom introduces the new modulation station MS-200D+. This device gives musicians 149 spatial effects ranging from lush choruses to crystal-clear delays to atmospheric reverbs. This single stompbox can shape your tone and provide endless depth and textures.

The MS-200D offers the following effects:

- Chorus - 43 different chorus and modulation effects that add depth and motion to your sound including phasing, flanging, tremolo, vibrato, detuning, and pitch shifting.
- Delays - Featuring 29 mono and stereo delays, with delay times of up to 4 seconds. Everything from reverse and multi-tap to pitch-shifted and self-oscillating delays
- Reverbs - 33 sophisticated studio-quality effects. From spring and plate reverbs to giant hall and arena reverbs.
- Dynamics / Filters - Round out your sound with 44 dynamics and filters such as EQ's, compression, noise reduction, and special effects.

The MS-70CDR+ offers expansive parameters for each effect, allowing you to dive deep into tweaking your tone. Use a singular effect or up to 6 simultaneously to create unique tones. Save your creations in one of the 100 patch slots, or use the 80 preset patches as inspiration to get you started. Newly designed analog circuits provide more fidelity for improved sound quality. The flat phase response provides sharp attacks and clean low end.

The MS-70CDR+ has stereo input jacks that accept signals from passive and active guitars, as well as line-level devices such as synthesizers. Its dual line-level output jacks enable you to record and perform with the MS-70CDR+'s 58 stereo effects. For musicians looking to add lush layers to their synths or keyboards, the MS-70CDR+ provides high-quality effects that are perfect for adding atmosphere and character to your sound.

With USB MIDI, you can connect the MS-70CDR+ to other MIDI gear to remotely trigger patch changes. The Cross Key switches allow you to instantly switch between effects and patches with a tap of your foot. Adjusting and tweaking parameters for each effect can be done with the four encoder knobs. The LCD backlight changes color to make it easier to distinguish each category of effects while scrolling. The MS-70CDR+ is built around a metal frame designed to withstand the rigors of live performances. The MS-70CDR+ runs on 2 AA batteries, USB power or AC power.

The onboard chromatic tuner uses the color backlight to give visual feedback to help you tune quickly and accurately. It supports all standard guitar tunings as well as open & drop tunings. With a growing library of patches and effects, guitarists can continue to expand their sound with the Handy Guitar Lab for MS-70CDR+ app for iOS.
