

Arturia Acid V

Acid V is a software instrument inspired by the cult-classic bass synth that pushed the underground into overdrive. Reactive ever-evolving bass grooves, mutated sequences fizzing with distortion, and revitalized rave experimentations await.

Here's what's included:

- Little box, big bass: A simple synth that changed bass for good, reborn in plugin form with component-level accuracy, capturing the pure sonic essence of a certified classic for today's producers.
- In constant motion: Acid V is all about movement; users can instantly spawn jagged polymetric sequences, hypnotic scale-based patterns, and endless sonic mutations.
- Rave revitalized: The strobe-lit dance movements of the '80s right through to modern day share the same analog DNA; now it's ready to be manipulated, reinvented, and transformed in any DAW.
- A mutated classic: Steer the 303 sound into experimental territory with upgraded features & effects delivering sounds far darker, deeper, and more impactful than the original.

Arturia releases Acid V: Corrosive Bassline Machine

Tuesday, 22 August 2023 17:00
