

Krotos AI Ambience Generator

Krotos, a company with expertise in innovative sound design technology, announces the release of Krotos Studio 2.0.3, featuring a powerful AI Ambience Generator. This new tool empowers all content creators including but not limited to film makers, sound designers and game developers to craft dynamic and customizable soundscapes by simply describing a scene. With access to a vast library of professionally recorded sounds, users can quickly generate high-quality ambiences tailored to their projects, offering greater flexibility and creative control.

The AI Ambience Generator allows both Krotos Studio and Krotos Studio Pro users to create immersive, dynamic soundscapes simply by typing a description. Whether crafting the sound of a "forest at dawn" or an "urban city night," this tool leverages AI to search through Krotos' vast and ever-expanding library of professionally recorded sounds to generate customizable presets in real-time. Unlike fixed audio files, the AI Ambience Generator produces editable presets that can be fine-tuned to meet specific project needs that makes the process of adding sound effects to video faster than ever before. Users can then export the soundscapes directly to any DAW or NLE, including Adobe Premiere and DaVinci Resolve, ensuring seamless integration into their workflow.

George Dean, Lead Software Developer at Krotos Studio, shared his enthusiasm for the new feature: "The AI Ambience Generator is proving to be one of our most popular features. It unlocks a seamless workflow where users can create high-quality, customisable soundscapes in seconds, using only their imagination and a description. Instead of spending time searching through libraries, they can focus on their creative vision and move faster through their projects"

Krotos introduces AI Ambience Generator in Krotos Studio

Wednesday, 02 October 2024 09:32

Key Benefits:

- **Precision:** Go beyond sound libraries and presets; generate the exact background ambience you need in seconds.
- **Customization:** Balance the elements of the soundscape with a few easy controls, and generate any duration of ambience
- **Quality:** Use pristine, high-fidelity audio free from synthetic artifacts, recorded by top-tier sound engineers

This feature streamlines the creative process, allowing users to stay in the flow without browsing through endless sound libraries
