

Nembrini Double Reverb

The new Nembrini Audio plugin is modelled after the classic 1972 Fender Twin Reverb Silver Face combo amplifier. The plugin offers guitarists all the warm, clean tones and lush reverb of the timeless amp. With its iconic design and powerful sound, the Fender Twin Reverb Silver Face amplifier is one of the company's most recognisable amps. Known for its clean headroom, fantastic tone and remarkable voicing, the amp is suitable for just about any style of music as well as working with a wide range of pedals. Nembrini's Double Reverb Guitar Amplifier plugin faithfully reproduces every component of the original hardware, from the warm 6L6GC power tubes and the vibrant 12AX7 preamp tubes to the sumptuous Accutronics spring reverb and dynamic vibrato. The result is a responsive, organic feeling plugin that sounds identical to the original amp.

Each of Double Reverb's two channels, Normal and Vibrato, has its own volume control and tone stack, bass, middle and treble. The built in spring reverb is a standout feature of the plugin providing a rich, spacious sound that ranges from subtle shimmer to full, surf-style wash. It also includes a vibrato or tremolo effect which can be used to modulate a signal to create a pulsating sound. The choice between six carefully selected guitar cabinets emulations and four of the best microphone emulations with selectable positions and volume and pan controls adds even more versatility to the plugin. Plus, the complete mixer section allows two microphones to be blended together to further enhance ambience.

Introductory prices of \$29.99 for the Desktop version (regular price \$137) and \$9.99 for the IOS form (regular price \$19.99) are available until 31st August 2024. Double

Nembrini releases the Double Reverb Guitar Amplifier Plugin

Monday, 05 August 2024 11:34
