

## Nomad Factory Retro EQs Bundle

Nomad Factory Pulse-Tec EQ

Nomad Factory and Plugivity Distribution announce the launch of Retro EQs Bundle that contains updated and upgraded versions of Nomad Factory's acclaimed Pulse-Tec EQs and All-Tec EQs, (software emulations of the legendary PULTEC and ALTEC EQs) to version 2.0, adding new modules and features to both plug-ins and full compatibility, with latest Windows and macOS systems and latest native Silicon chips compatibility. An introductory promo is actually running with both individual plug-ins at \$29 each (LIST \$129) and the new "Retro EQs Bundle" at only \$39 (LIST \$199).

Audio Software distributor and Plug-in Manufacturer Plugivity today proudly announce that they have finalized and launched major updates to Nomad Factory's flagship products, Pulse-Tec EQs and All-Tec EQs (Faithful Emulations of the

legendary PULTEC & ALTEC hardware equalizers) to version 2.0. These awaited updates bring full support to the latest Windows and macOS operating systems as well as native compatibility with latest Apple Silicon chips. This is also a major UPGRADE to both Pulse-Tec EQs and All-Tec EQs plug-ins adding useful new modules and features to the product line as well as completely redesigned, hi resolution and resizable GUIs, and two different skins (Classic and Fancy White).

The Pultec EQP-1, the first passive program EQ, was introduced in the early 1950s and revolutionized recording techniques by allowing more control over the sound. The Pultec EQs gained popularity because they improved any signal that passed through them, even in bypass mode. They are still being used today. The EQP-1 was followed by the EQP-1A (with some variations of the low end curves) and other Pultec models such as the MEQ-5 for midrange and the HLF module for high-pass and low-pass filtering.

The Pulse-Tec EQs by Nomad Factory faithfully reproduce the original hardware units' curves and offer the three modules in a single plugin. But the new version also adds four unique features that make the Pulse-Tec EQs 2 by Nomad Factory the ultimate Pultec emulation:

- **LINKABLE Boost/Attenuation Low End:** The classic Pultec trick (for punchy low end) is easier than ever to achieve.
- **2 MID CUT BANDS:** The dream feature that every engineer has always wanted; you can finally remove boominess and harshness at the same time.
- **ANALOG CIRCUITS:** You can adjust the amount of harmonic distortion and make it sound clean or you can go beyond and enhance the vintage tube and transformer vibe, just like from the original unit.
- **MIX:** You can blend dry and processed sound to create subtle or dramatic variations.
- The Altec 9063 EQ was a very popular mastering EQ in the 1950s, and the graphic models 9062 and 9073 were also known as the Ultimate Motown EQs.

## Nomad Factory All-TEC EQ

The Nomad Factory All-TEC EQs emulate all the features of the Altec EQs, plus the very precise high-pass and low-pass filters. With the Nomad Factory All-TEC EQs v2, you can experience the "legend" of the Altec EQs in a single plugin. The adjustable analog saturation makes it sound closer than ever to the original units, and you can also boost the harmonic content beyond the natural level and make it sound more gritty and aggressive. The extra mix control feature is perfect for blending in some of the dry signal and creating unique tone variations. The Pulse-TEC EQs v2 and All-TEC EQs v2 are the perfect combo to bring the classic top-class vintage sound to your DAW.
