

TONE2 Audio Saurus 4

Finally, true analog sound does no longer require compromises! Saurus is an authentic emulation of analog synthesizers. It covers all aspects of the most famous and expensive synths, but without disadvantages.

The upgrade to v4.0 is free for all Saurus owners. It comes with a new GUI in 22 sizes, HiDpi support, enhanced sound, reworked graphics, support for hardware-acceleration and many improvements.

New features - interface:

- GUI with 20 different sizes (with and without keys).
- Native support for WQHD, 4K, 5K and 8K UHD displays.
- GUI can be scaled from 66% up to 300% by clicking in the lower right corner.
- Reworked and enhanced graphics.
- Smoother animations and more responsive controls.
- Support for hardware-acceleration.
- Ultrasharp graphics with enhanced HiDpi and Retina Display support.
- Automatic detection of the ideal GUI size.
- Completely rewritten GUI code.
- More contrast for the LCD displays.
- The animations are faster and smoother.
- Fine-tuned some coordinates in the interface.
- Re-sizing the VST3, Standalone and Audiounit works more reliable.

TONE2 Audio releases Saurus 4

Thursday, 06 April 2023 13:13

- Fine-tuned some colors.
- Removed the demo-version timeout and added a voice-over.
- Patch browser can now also be opened by clicking on 'BROWSER' or the display on the upper left.
- A finger is shown when hovering over 'BROWSER' to indicate that the control is click-able.

Enhancements - sound quality:

- The audio-engine now uses 64-bit precision instead of 32-bit, which results in a higher sound-quality.
- Slightly enhanced sound of the automatic micro-tuning.
- Enhanced sound of the Reverb.
